

## **Warehousing**

Universal understands all of your product storage and material handling requirements. With our superior capability, broad network, and integrated system capability, Universal can meet all of your warehousing and material handling needs. We specialize in the custom design and implementation of strategic solutions to fit your supply chain, and Universal manages and operates some of North America's largest and highest velocity material handling facilities.

We will handle your entire order fulfillment process, from warehousing and receiving orders, to providing the picking and packing of the material for shipment, to delivery. We employ the latest technology-enabled processes, coupled with the highest standards in quality, service levels, and statistical process controls to provide you with a dependable, controllable infrastructure to improve your service levels and reduce your costs. We also offer cross-docking and value-added services to supplement your order fulfillment needs.

We produce extremely accurate inventories and maximize pick efficiency and velocity with our very high-quality processes, tools, and systems. Our AccuLinc® system scans every action on every part and captures all part movement history throughout the entire cycle. As well as providing a totally accurate inventory and precise location control, comprehensive electronic scanning at every station enables the serial tracking of parts, sequencing, kitting, repacking, and labeling all in a technology-enabled and error-proof structure. AccuLinc® can be integrated with your, and your suppliers', information systems and networks.

We can quickly adapt and respond to your specific requirements and efficiently perform all fulfillment functions. We provide total visibility to all parts at all times -- and all processed to 99.99% inventory accuracy level!

» **Inventory Receiving & Container Returns**

- 1** Inbound shipments are received and directed to their appropriate destination
- 2** Individual shipments can be cross-docked -- moved directly from the inbound dock to the outbound dock, avoiding the need to put them away in the warehouse and subsequently pick them
- 3** Parts to be combined into finished-goods or sub-assemblies can be moved directly into the Value-Added Services Work Center (VAS)
- 4** Material is moved to, and put away in, the Forward Pick Area if it is destined for short-term storage
- 5** Material is moved to, and put away in, Reserve Storage if it is destined for longer-term storage. As necessary, material can be picked and moved from Reserve Storage to the Forward Pick Area, or from the Forward Pick Area to VAS
- 6** Whether shipments arrive directly from the receiving dock, from a VAS process, or from storage, loads are staged and assembled on the shipping dock for transport to the ultimate consignee
